SPP INTÉGRATION SOCIALE
MIEUX VIVRE ENSEMBLE

1. Definition

Flashing =

Result of the cross-referencing of CPAS forms with BCSS flows relating to possible income.

Available streams: Family allowances and birth bonuses, unemployment and activation of unemployment, income from work: DIMONA and DFMA data flows, pension income, cadastral income, insurability, less-valid allowances

- **Indicator and** not exact science: the SPP IS can not control:
 - Accuracy of information
 - Update time
- **Help:** complete a regular consultation of the BCSS, **do not replace it**

2. Balance sheet

Results (2016)

16,474 files on 256,431 with at least one flashing = 6.42%

➤ EUR 4,020,967 = total amount of corrections

2. BALANCE SHEET

The quality of the flashing depends on:

1. Flow information:

- SPP IS uses authentic sources from third parties
- Some data are only available late

2. Form information:

This information is incorrect or incomplete.

Example:

- The income of the former spouse is taken into account because it is always mentioned in form B.

3. Blinker tracking

Examine the information of the turn signals

Two possibilities :

- Correct information: The CPAS takes the necessary measures (new decision, modification of the form ...)
 - Flashing justified
- Incorrect information: provide feedback to SPP IS
 - via the biannual list containing the feedback codes (current system).
 - Directly transmit (online) the feedback code (in the future).
 - Unjustified flashing

4. Perspectives

Add new feeds to the cross

SPP IS is exploring the possibility of using other authentic sources that would cross the data:

- Inmates (SPF Justice)
 - Work incapacity (mutual),
 - Guarantors (FPS Foreign Affairs)
- Waiting for the provision of these flows for the CPAS

4. Perspectives

Automation of turn signals

Given the success of the measure, the SPP IS has undertaken to optimize the automation of flashing management.

4. Perspectives

The Inspectorate of the SPP IS

On-site follow-up by the Inspection department to help CPAS
The flashing quality depends on:
to determine and eliminate the causes of the indicators.

Goal: bring back all the CPAS under the 5% of files having a flashing.
